CHAPTER 8 - DRUGS & MEDICATIONS POLICY

DM801 Drug Testing

Horse Show Management will determine if random drug testing will be required through ESC. Horse Show Management and ESC have the right to randomly drug test any horse on the show grounds, and may be required by law should there be an animal welfare concern. ESC will provide results of those tests to government authorities where required by law. ESC recommends random drug testing at shows with 250 or

	<p style="text-align: center;">Rules & Guidelines ©ESC2023 EquineSportsCouncil.org 1-855-Equine1</p>	<p>Page: 62 of 139 Year: 2023 Version: 5.0</p>
---	---	---

more entries. ESC will randomly select the horses exhibiting for drug testing by a licensed veterinarian. Horses exhibiting in the Academy divisions are not candidates for random selection unless there is an animal welfare concern.

DM802 Medication Classifications & International Standards

ESC subscribes to the Uniform Classifications Guidelines for Foreign Substance. Testing specifically targets performance enhancing drugs. Therapeutic substances in Drug Classes 4 and 5 may be permitted if used responsibly. Class 1 medications are strictly prohibited at all ESC governed shows. A positive test result in Drug Class 1 will result in penalties.

Medications administered from Class 2 through 4 require that an ESC Medications Report be completed 1 hour before competing:
<https://fs24.formsite.com/equinesports/medicalreport/>

Approved Drug Testing Labs

When it becomes necessary to perform a drug test the show management must coordinate with ESC by calling 855-Equine1.

It's preferred that the commissioned show vet work with an RMTC certified lab. Or, an ISO 17025 certified lab may be used to run RMTC panels. The vet must follow RMTC/ISO 17025 collection practices of samples, and use a lab that has RMTC or ISO 17025 certifications.

A list of approved RMTC labs can be found here:

DM803 Banned Medications – Performance Enhancing

CLASS 1: Stimulant & Depressant drugs that have the highest potential to affect performance and that have no generally accepted medical use in equines. Many of these agents are Drug Enforcement Agency (DEA) schedule II substances.

These include the following drugs and their metabolites: Opiates, opium derivatives, synthetic opioids and psychoactive drugs, amphetamines and amphetamine-like drugs as well as related drugs, including but not limited to apomorphine, nikethamide, mazindol, pemoline, and pentylenetetrazol. Though not used as therapeutic agents, all DEA Schedule 1 agents are included in Class 1 because they are potent stimulant or depressant substances with psychotropic and often habituating actions. This class also includes all erythropoietin stimulating substances and their analogues.

CLASS 2: High Potential to Affect Performance, but less of a potential than drugs in Class 1. These drugs are 1) not generally accepted as therapeutic agents in equines, or 2) they are therapeutic agents that have a high potential for abuse. Drugs in this class include: psychotropic drugs, certain nervous system and cardiovascular system stimulants, depressants, and neuromuscular blocking agents. Injectable local anesthetics are included in this class because of their high potential for abuse as nerve blocking agents.

CLASS 3: Potential to Affect Performance in equines, but the pharmacology of which suggests less potential to affect performance than drugs in Class 2. Drugs in this class include bronchodilators,

	<p>Rules & Guidelines ©ESC2023 EquineSportsCouncil.org 1-855-Equine1</p>	<p>Page: 64 of 139 Year: 2023 Version: 5.0</p>
---	--	--

anabolic steroids and other drugs with primary effects on the autonomic nervous system, procaine, antihistamines with sedative properties and the high-ceiling diuretics.

DM804 Allowed Therapeutic Medications

When used responsibly and in a controlled environment these medications have less potential to affect performance and many are required as health management regimens for equines. The practice of “Stacking Multiple” therapeutic medications can be a health risk to horses and will result in suspensions and/or penalties. Please consult with your vet for correct dosing amounts.

CLASS 4: NSAIDs & Similar Therapeutic that have less potential to affect performance than those in Class 3. Drugs in this class include less potent diuretics; corticosteroids; antihistamines and skeletal muscle relaxants without prominent central nervous system (CNS) effects; expectorants and mucolytics; hemostatics; cardiac glycosides and antiarrhythmics; topical anesthetics; antidiarrheals and mild analgesics. This class also includes the non-steroidal anti-inflammatory drugs (NSAIDs), at concentrations greater than established limits.

CLASS 5: Localized Therapeutics only, such as anti-ulcer drugs, and certain anti-allergic drugs. The anticoagulant drugs are also included.

DM805 Therapeutic Administration Guidelines

The following thirteen drugs or medications are permitted (Exception: does not apply if prohibited by government regulations). Guidelines listed are applicable to most horses; however, all responsible parties are

cautioned that they are only general guidelines. The suggested guidelines listed below should be followed to minimize the risk of toxicity and/or overdose.

1. Phenylbutazone (an NSAID) (12 hours before showing)

Guidelines: When phenylbutazone is administered, the dose should be accurately calculated according to the actual weight of the animal. Each 24 hours, not more than 2.0 milligrams per pound of body weight should be administered, preferably less. For a 1,000 pound animal, the maximum daily dose is 2.0 grams, which equals two 1.0 gram tablets, or two 1.0 gram units of paste, or 10.0 cc of the injectable (200 milligrams per milliliter). In the event the phenylbutazone is administered orally, half of the maximum daily dose (1.0 gram per 1,000 lbs.) should be administered every 12 hours (i.e., 12 hours apart) during a five day treatment program even if such oral administration occurs within 12 hours of competition. Phenylbutazone should not be used for more than five successive days.

2. Flunixin (NSAID) (12 hours before showing) Guidelines: When Flunixin Meglumine (Banamine®) is administered, the dose should be accurately calculated according to the actual weight of the animal. Each 24 hours, not more than 0.5 milligram per pound of body weight should be administered. For a 1,000 pound animal, the maximum daily dose is 500 milligrams, which equals two 250 milligram packets of granules, or one 500 milligram packet of granules, or 500 milligrams of the oral paste (available in 1,500 milligram dose syringes), or 10.0 cc of the injectable (50 milligrams per milliliter). The medication should not be used for more than five successive days.

3. Ketoprofen (a NSAID) (12 hours before showing)
Guidelines: When Ketoprofen (Ketofen®) is administered, the dose should be accurately calculated according to the actual weight of the

animal. Each 24 hours, not more than 1.0 milligram per pound of body weight should be administered. For a 1,000 pound animal, the maximum daily dose is 1.0 gram, which equals 10.0 cc of the injectable (100 milligrams per milliliter). The medication should not be used for more than five successive days.

4. Meclofenamic Acid (NSAID) (12 hours before showing)

Guidelines: When Meclofenamic Acid is administered, the dose should be accurately calculated according to the actual weight of the animal. Each 12 hours, not more than 0.5 milligram per pound of body weight should be administered, preferably less. For a 1,000 pound animal, the maximum 12 hour dose is 0.5 gram, which equals one 500 milligram packet of granules. The medication should not be used for more than five successive days.

5. Naproxen (NSAID) (12 hours before showing) Guidelines:

When Naproxen is administered, the dose should be accurately calculated according to the actual weight of the animal. Each 24 hours, not more than 4.0 milligrams per pound of body weight should be administered. For a 1,000 pound animal, the maximum daily dose is 4.0 grams, which equals eight 500 milligram tablets. The medication should not be used for more than five successive days.

6. Diclofenac (Surpass) (NSAID) (12 hours before showing)

Guidelines: Every 12 hours, not more than 73 mg of diclofenac liposomal cream should be administered (not more than 146 mg per 24 hour period) to one affected site. This 73 mg dose equals a 5-inch ribbon of cream not greater than 1/2 inch in width, which should be rubbed thoroughly into the hair over the joint or affected site using gloved hands. Do not apply diclofenac cream in combination with any other topical preparations including DMSO, nitrofurazone or liniments,

and do not use on an open wound. Diclofenac cream should not be administered for more than 10 consecutive days.

7. Firocoxib (Equioxx) (NSAID) (12 hours prior to showing)
Guidelines: When Firocoxib (Equioxx) is administered, the dose should be accurately calculated according to the actual weight of the animal. For a 1,000 pound animal, the maximum daily dose is 45.5 milligrams, which equals 0.1 milligram per kilogram of body weight once daily.

Firocoxib (Equioxx) should not be administered for more than 14 consecutive days.

8. Dexamethasone (24 hours prior to showing) Guidelines: Whenever dexamethasone is administered, the dose should be accurately calculated according to the actual weight of the animal. These guidelines include several alternative scenarios for dose time and route of administration.

a. Alternative Number 1. Each 24 hours, not more than 2.0 milligrams of dexamethasone injectable solution per 100 pounds of body weight should be administered intravenously or intramuscularly, preferably less. For a 1,000 pound animal, the maximum daily intravenous or intramuscular dose of dexamethasone injectable solution is 20.0 milligrams, which equals 5.0 milliliters of the injectable solution (4.0 milligrams per milliliter). Dexamethasone should not be administered for more than five successive days. b. Alternative Number 2. Each 24 hours, not more than 0.5 milligram of dexamethasone injectable solution per 100 pounds of body weight should be administered intravenously, preferably less. For a 1,000 pound animal, the maximum daily intravenous dose of dexamethasone injectable solution is 5.0 milligrams, which equals 1.25 milliliters of the injectable solution (4.0

milligrams per milliliter). Dexamethasone should not be administered for more than five successive days. c. Alternative Number 3. Each 24 hours, not more than 1.0 milligram of dexamethasone powder per 100 pounds of body weight should be administered orally, preferably less. For a 1,000 pound animal, the maximum daily oral dose of dexamethasone powder is 10.0 milligrams, which equals one packet of dexamethasone powder (10.0 milligrams per packet). No part of this dose should be administered during the 6 hours prior to competing. Dexamethasone should not be administered for more than five successive days.

9. Acetazolamide (24 hours prior to showing) Guidelines:

When Acetazolamide is administered, the dose should be accurately calculated according to the actual weight of the animal. Each 24 hours, not more than 3 milligrams per pound of body weight should be administered. For a 1,000 pound animal, the maximum daily dose is 3 grams.

10. Furosemide or Lasix (4 hours prior to showing), when used, must be administered intravenously at least four (4) hours prior to competition.

11. Isoxsuprine (4 hours prior to showing) No part of a dose should be administered during the four (4) hours prior to competing. Any medicated feed should be consumed and/or removed at least four (4) hours prior to competition. Guidelines: When administered, the dose should be accurately calculated according to the actual weight of the animal. Each 24 hours, not more than 1.6 milligrams per pound of body weight should be administered (usually divided in two equal doses given 12 hours apart). For a 1,000 pound animal, the maximum

---	--	---

daily dose is 1,600 milligrams, which equals 80 20-milligram tablets.

12. Lidocaine/Mepivacaine (24 hours prior to showing), When administered within 24 hours of showing, may only be used under actual observation of event management (or designated representative) and/or the official show veterinarian, either of which must sign the medication report form, to aid in the surgical repair of minor skin lacerations which, by their very nature, would not prevent the horse from competing following surgery.

13. Omeprazole/Ranitidine – Are ulcer and gastro reflux medications which are permitted while showing.

CHAPTER 9 – DISCIPLINE GUIDELINES

DG901 Saddle Seat

A form of English riding that is designed to showcase horses with a high-stepping, two beat trot. Horses maintain a high head carriage, collection, and a balanced cadence. Horses are shown both directions of the ring at the walk, trot and canter with some breeds exhibiting at the slow gait and rack. Horses should be naturally expressive and judged on the excitement of their performance, followed by quality, presence and way of going.

CS10.600 HJ Hunter Jumper Rules

The US Hunter Jumper Association located in Lexington, KY is the official national discipline association, and the HJ judging standards may be used for specialty classes where complex patterns such as equitation medal classes. The ESC Hunter Jumper rules are a general sports concept intended for use by non-Olympic competitors. Hunter/Jumper classes at show management discretion may be open to all breeds including ponies (have measurement requirements) and Thoroughbreds (validation of Jockey Club registration required).

- **Course Designs** - Typically consist of 8 to 10 jumps for Hunters and 12 -16 jumps for Jumpers.. When building a course, keep the obstacles the same size or gradually increasing in size. Never have one element lower than the previous one, as this will encourage 'diving'. Ensure that turns are not too tight – you should have enough room to make your turn and then get several strides of approach in a straight line. No oxers permitted, An oxe refers to a jump that has two sets of standards placed close together with poles across each. This increases the overall width of the fence and the horse has to jump both standards in one go.

The Hunter and/or Jumper course designer, or their designated representative, must be present at all sessions of a competition and be available to report to the judge at any time that the course is ready in all respects. The Hunter course designer is responsible for the correctness of the course and must give

consideration to any suggestions made by the judge. The Jumper course designer is responsible for laying out the course, building the obstacles and for the measurement of the course. COPIES OF THE COURSES MUST BE GIVEN TO THE JUDGES.

- **Hunters** - The origin of the show ring hunter can be found in the sport of fox-hunting where horse and rider galloped over miles of countryside with varying terrain negotiating natural obstacles (fences, hedges, stone walls) encountered along the way while in the pursuit of the game. Modern hunter classes were designed to test the qualities and attributes of a successful hunt horse. These classes are subjectively judged based on the horse's performance over fences as well as its quality of movement under saddle on the flat. Show hunters should possess good style over the jumps, consistent pace throughout the course, as well as quiet manners. Hunter rounds should appear smooth and effortless to the spectator with the horse and rider working together to make the course flow from one jump to the next. Hunter courses typically consist of eight to ten jumps that are more organic in form and generally lower in height than fences used in jumper classes.
- **Jumpers** - Jumper classes are scored objectively based solely on the horse's athletic ability over fences as measured by time. A jumper's only job is to clear all the fences in the course as quickly as possible without incurring any faults. A horse incurs faults for each mistake made: four faults for each rail knocked down, four faults for every refusal, and 1 fault for

every second over the maximum time allowed to negotiate the course. The horse with the least amount of faults and the fastest time wins. Jumper courses, which are technical in nature and typically consist of 12-16 jumps, require strategic riding in addition to a swift pace.

- **Equitation** - Equitation classes are judged on the rider's ability, form, and skill to allow the horse to perform at its best, but the horse itself is not judged at all. The types of jumps and elements that make up an equitation course can resemble those used in either hunter or jumper classes, but the judging is subjectively based on the rider's position, style, proficiency, accuracy, use of the aids (hands, seat and legs), as well as an overall impression of complete and quiet control.
- **Beginner, Intermediate & Advanced** - Riders must enter classes according to their experience level. Beginner classes are for riders with less than 1 year of show experience. Intermediate classes are for riders with 1- 2 years of show experience. Advanced classes are for riders with 3 or more years of show experience. Riders may not cross enter divisions at this show. Riders that have shown in an Advanced or Intermediate class at another show during the year may not enter a lower division. Riders that misrepresent their experience levels, and show in the incorrect divisions must be disqualified from the show, issued a Severe Infraction and reported to ESC.

If a refusal occurs in a double or triple, riders shall re-jump all elements of the combination. When competing in UPHA National Finals, Walk Trot riders receive 50% of their points in the qualifier (preliminary) class and the top 10 riders advance to the Finals (championship), where riders receive 50% of an overall score that determines the champion.

For permission to offer this class and complete details please refer to the website for "Saddle & Bridle" magazine at www.saddleandbridle.com.

CS10.900 SADDLESEAT EQUITATION PATTERN STANDARDS

The following saddleseat equitation patterns are a sports concept that cannot be owned or copyrighted, and was developed over the years by the saddleseat industry. When a judge is selecting a pattern, the skillset of the riders in the class should be heavily weighed. Dropping of stirrups should not be selected for adult or young riders. **ESC highly discourages judges from choosing pattern 16 (exchange of horses), due to the inherent risk to the riders. Horse Show Management must get ESC approval and judge must be insured by ESC/NASO for use of pattern 16.** Judges must post patterns at least 2 hours before the start of the session.

- 1. Circle at a Trot** - When circling clockwise, rider should be on left diagonal; when circling counterclockwise, the rider should be on the right diagonal.
